# Platform bdporc<sup>®</sup>

**IRTA**<sup>R</sup>  
Institute  
of Agrifood Research  
and Technology

**BDporc is a representative database and a digital platform at the service of the pig sector. It offers reference information and benchmarking to its member companies and recognizes the best farms in the annual edition of the Porc d'Or awards.**

Managed by:

**IRTA**<sup>®</sup>

With the support of:

Currently, the BDporc system manages the data of almost one million sows, which represents around 50% of the national census. Since 2015, BDporc also manages the technical-productive data of reproductive farms in Portugal and Colombia, through agreements between IRTA and their respective associations at the national level.

#### Service to pig companies

**BDporc provides to pig production companies results, reference information and benchmarking tools of technical and production indicators.**

This allows BDporc member pig companies to perform a strategic analysis of the practices carried out in their company and farms by comparing them with reference groups of other farms with similar characteristics (by region, by size, by production system, etc.).

BDporc members receive a confidential quarterly report with comparative farm information against established benchmarks and receive the BDporc newsletter on a regular basis. They also have private access via the intranet where they can consult their data, prepare customized reports and use decision-making tools. Finally, BDporc member farms have the possibility to participate in the Porc d'Or Awards, a benchmark event for the sector that annually recognizes the best white and Iberian pig breeding farms.

To join BDporc, the farm must have a management software program that allows sending technical-productive data of the sows periodically and thus be able to make quarterly reports. The adherence to BDporc is formalized by means of a contract, where IRTA commits to provide the contracted services and guarantees the confidentiality of the data.

Know the terms and conditions and all the services offered by BDporc here:

#### Other services offered by BDporc:

- 1)** It provides administrations and sectorial associations with a global vision of the technical-productive data of the breeding sow populations.
- 2)** It offers the possibility of carrying out personalized reports and/or studies for genetic companies, institutions and universities by means of a contract or collaboration agreement between the parties.
- 3)** It can analyze technical-productive data from reproductive farms in other countries through agreements between IRTA and their respective associations at the national level.
- 4)** The general public has access to information on the global annual results and studies carried out in the BDporc public portal ([www.bdporc.irta.es](http://www.bdporc.irta.es)) or through publications in specialized and scientific journals.
